# Unofficial Nord Stage 3 Program File Documentation

# christian.florentz@gmail.com

# Let's get started

This file documents the Nord Stage 3 program file structure. It is handmade by NUF users and is not officially supported by Nord Keyboards / Clavia DMI AB. While we certainly hope this document is useful, none of the authors or contributors place any guarantees as to the accuracy of the data.

We contacted Nord Keyboards / Clavia DMI AB support about this project, and the answer was that they are fine with this project, and it can be published:)

https://ns3-program-viewer.herokuapp.com web application is the project behind this initiative. Source is located here: https://github.com/Chris55/ns3-program-viewer

## File Structure

This mapping corresponds to the Nord Stage 3 program file (file extension ns3f).

The file version used is 3.04 (generated with OS v2.54), and the file length is 592 bytes. Some older versions have a length of 574 bytes and a smaller header.

Offset 0x04 defines the file format.

Each memory offset corresponds to an 8-bit value.

```
0x01 \text{ (hex)} = 00000001 \text{ -> bit } 0 \text{ is '1'}

0x84 \text{ (hex)} = 10000100 \text{ -> bit } 7 \text{ and } 2 \text{ are '1'}
```

In the documentation --xxxxx (b5-0) means Bit5 to Bit0.

```

```

## Synth Filter Vel Mod Env Amount

```
Offset in file: 0xA4 (b4-0) and 0xA5 (b7-6)
```

Filter modulation (vel/env mod) is using this single 7-bit value to define two settings with a single keep Input Value is not the direct midi value as usual, instead it is coded on a special 0/120 range:

0 = 10.0 (100% left value) 'Vel Amount'

60 = 0.0 for both values

120 = 10.0 (100% right value) 'Mod Env Amount'

### Synth Filter Freq

Offset in file: 0x98 (b1-0) and 0x99 (b7-3)

See: Organ Volume for detailed Morph explanation.

Morph Wheel:
0x91 (b3): polarity (1 = positive, 0 = negative)
0x91 (b2-b0), 0x92 (b7-b4): 7-bit raw value
Morph After Touch:
0x92 (b3): polarity (1 = positive, 0 = negative)
0x92 (b2-b0), 0x93 (b7-b4): 7-bit raw value
```

Synth Pitch Rev 1.0

```
0x93 (b3): polarity (1 = positive, 0 = negative)
0x93 (b2-b0), 0x94 (b7-b4): 7-bit raw value
```

### Synth Pitch

```
Offset in file: 0x8f (b0) and 0x90 (b7-3)
```

 ${\tt Midi\ value\ =\ 6-bit\ value\ +\ b0\ forced\ to\ zero\ to\ have\ a\ standard\ Midi\ 7-bit\ value}$ 

value conversion: -12 (Sub) to +48

### Synth LFO Mod Env

```
Offset in file: 0x94 (b3-0) and 0x95 (b7-5)
```

Osc modulation (lfo/env mod) is using this single 7-bit value to define two settings with a single knob Input Value is not the direct midi value as usual, instead it is coded on a special 0/120 range:

```
0 = 10.0 (100% left value) 'LFO Amount'
```

60 = 0.0 for both values

120 = 10.0 (100% right value) 'Mod Env Amount'

#### Synth Fast Attack

```
Offset in file: 0xAC (b2)
```

0 = off, 1 = on
